Appendix SSL-erate – Stakeholder overview

Summary

This document details the dynamic stakeholder inventory that is a part of Work Package 5.

1 Introduction

The dynamic stakeholder map, provided in the Appendix and available as an Excel spreadsheet, was developed using input of all the work package partners and the promotion plan for year 1.

The aim of this more detailed stakeholder analysis is to reach beyond the traditional lighting value chain and to find as broad as possible a stakeholder audience for our promotion activities and Platform. It is our belief that by addressing stakeholders in accordance with their lighting needs, we can facilitate and enhance the faster uptake of SSL technology. A layout of relationships between the interest groups is provided as well.

2 Stakeholder inventory

In the Appendix a copy of an Excel spreadsheet is provided containing the dynamic stakeholder inventory. In total 360 stakeholders from all over Europe are already included. In Figure 1 an overview for relational information of stakeholder groups is given. For convenience and readability the left part and the right part of the overview are shown separately in Figure 2 and 3, respectively.

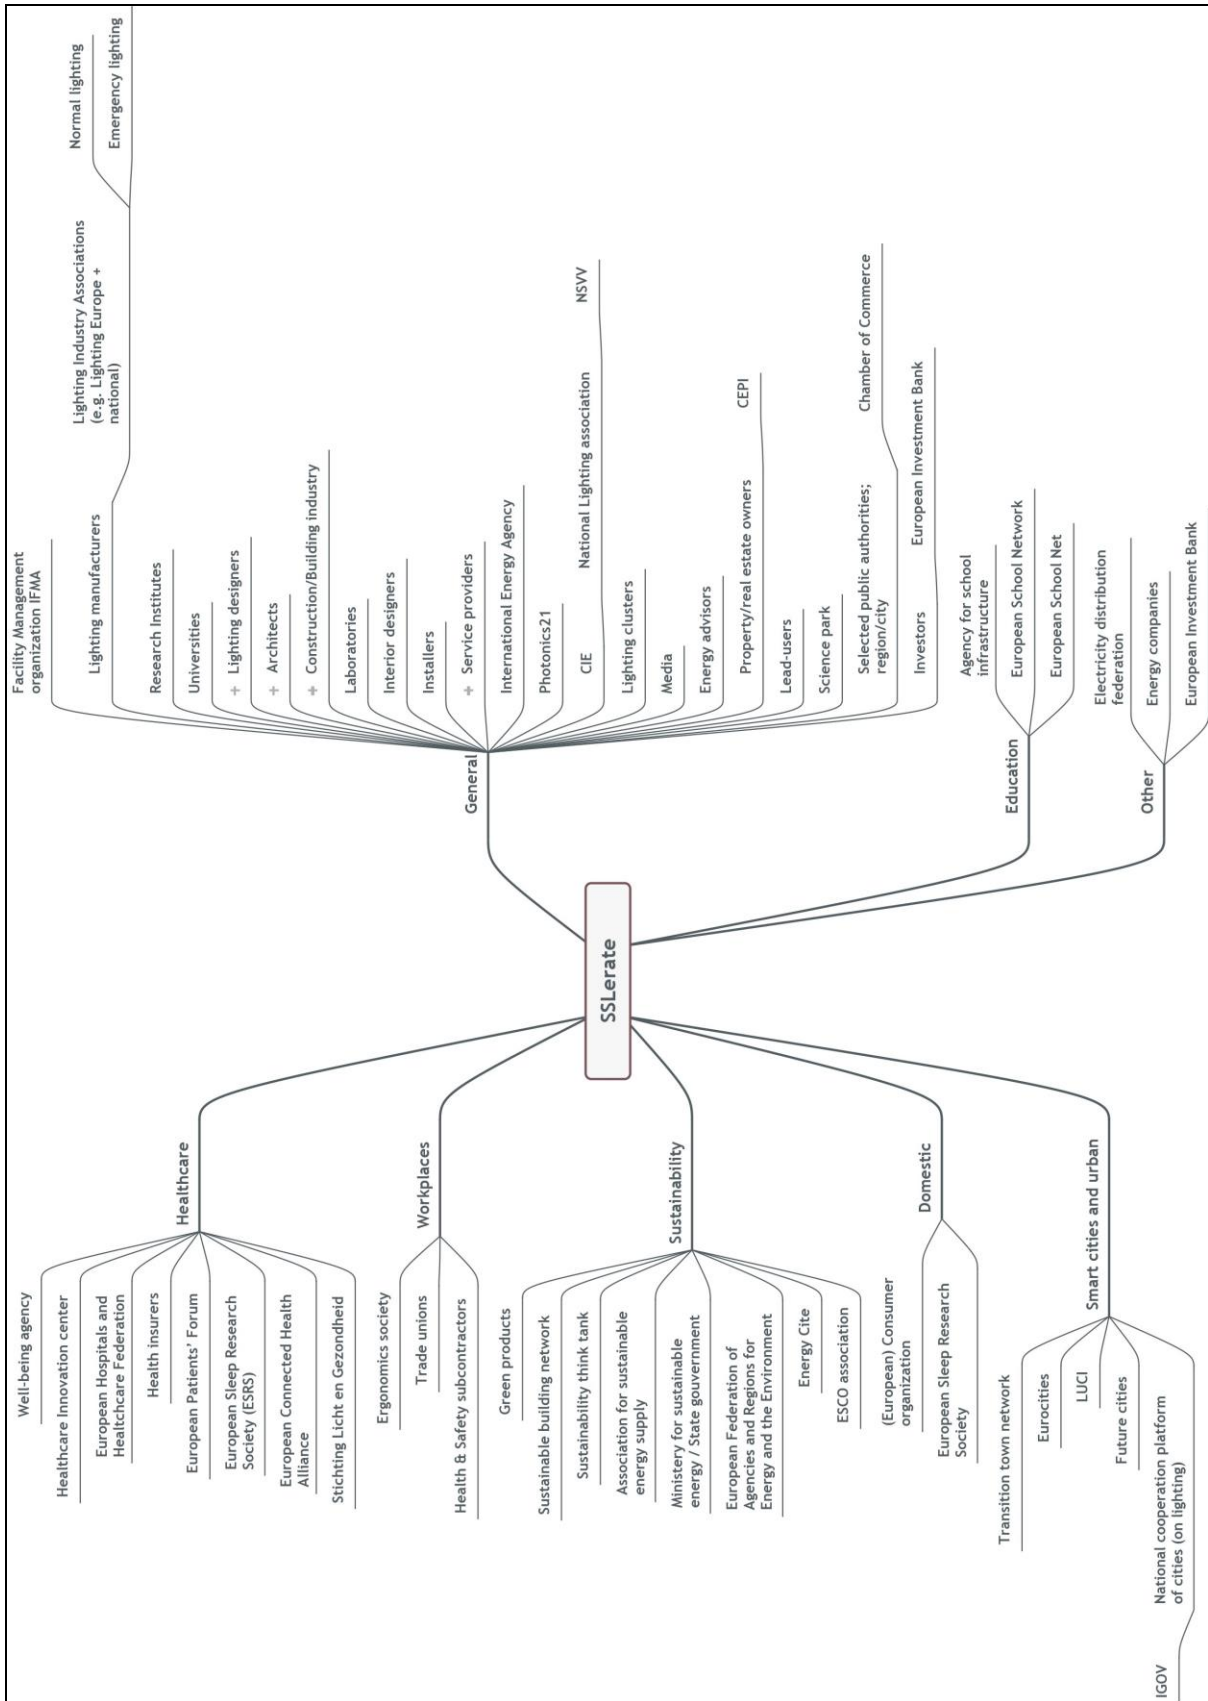

Figure 1 Relational overview of stakeholder groups.

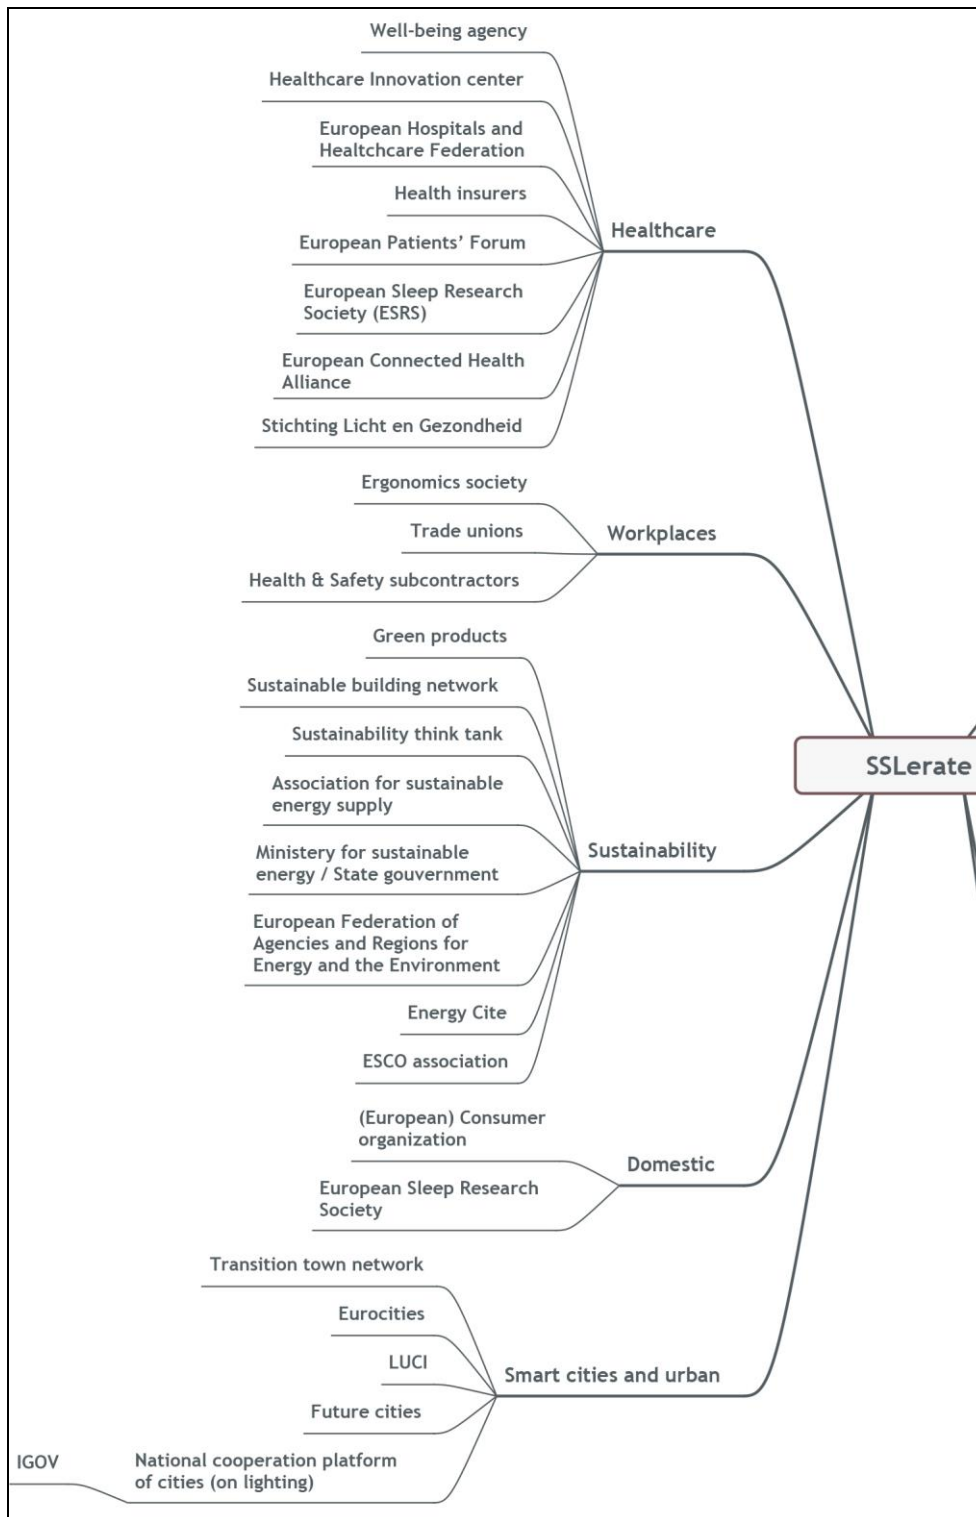

Figure 2 Left side of relational overview of stakeholder groups (see Figure 1.)

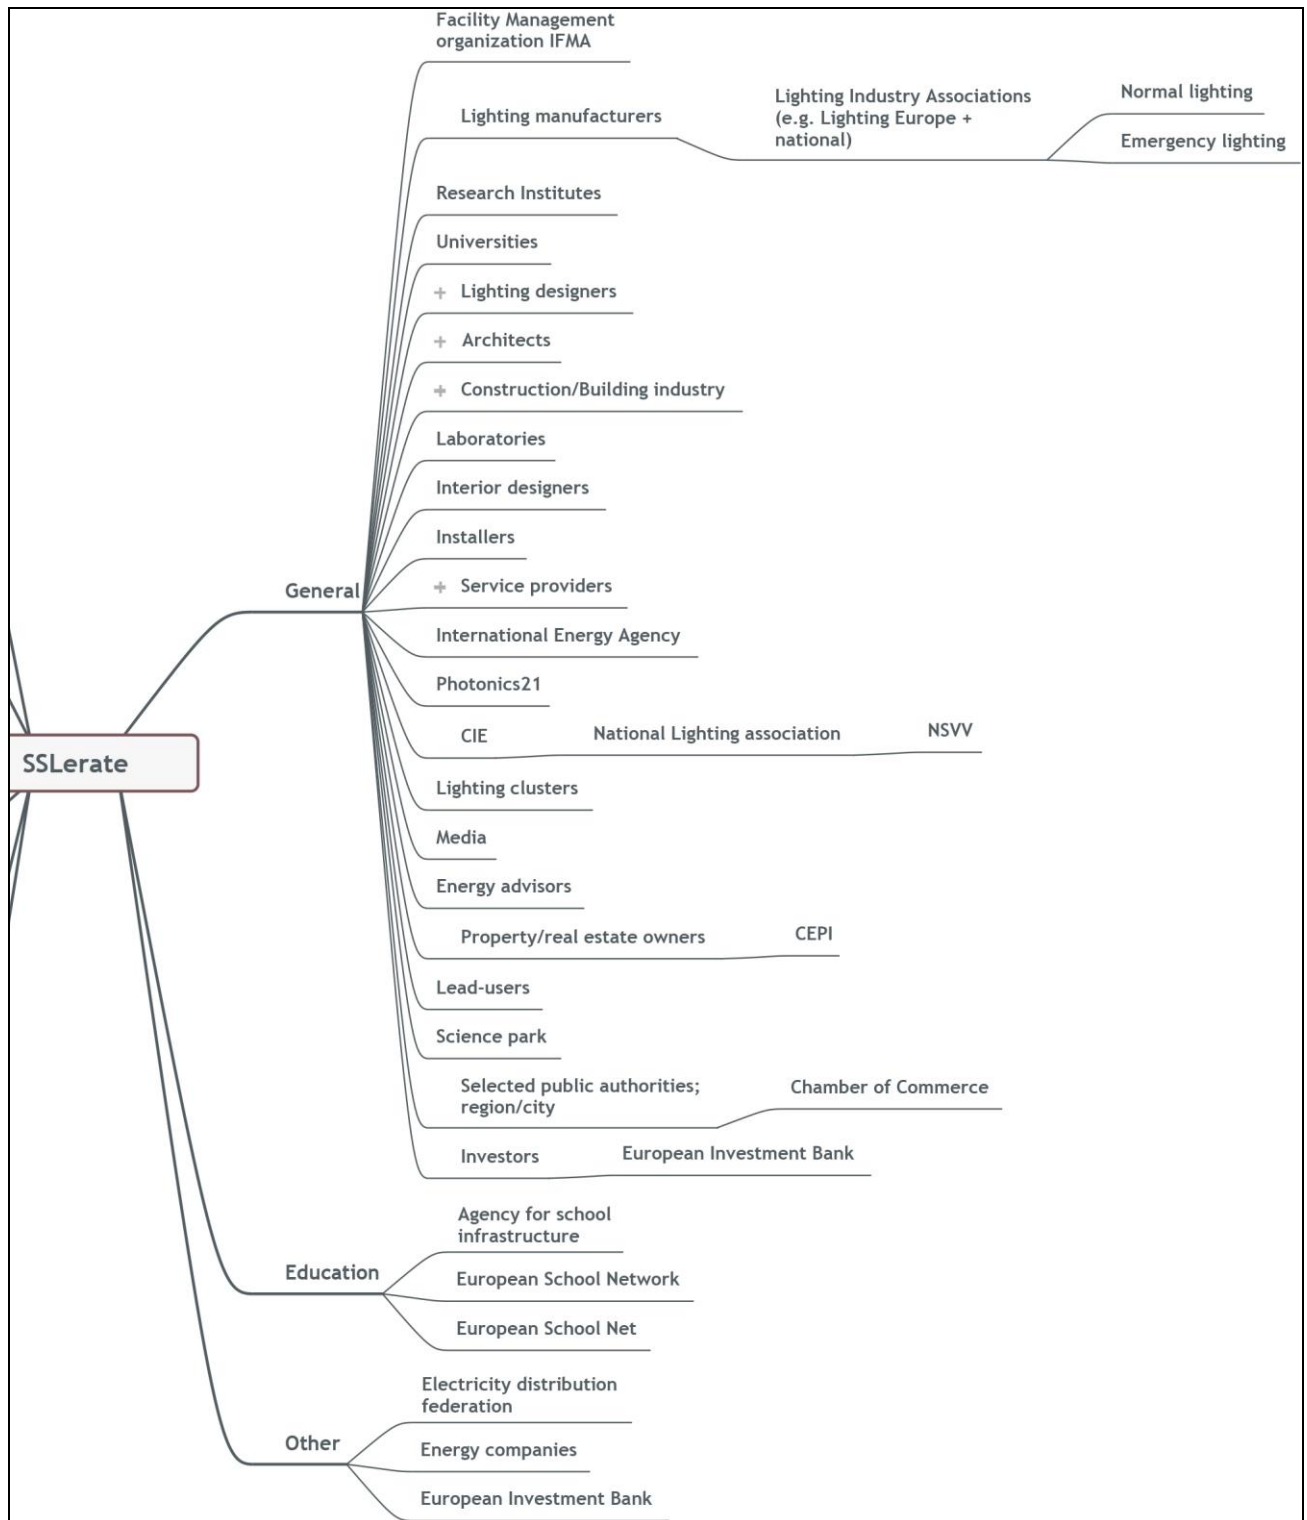

Figure 3 Right side of relational overview of stakeholder groups (see Figure 1).

3 Conclusions

This first dynamic stakeholder inventory will serve as a building block for continuous upkeep and additions. This document will be continuously updated with new information. As the SSL-erate project progresses, we will be able to better choose audiences and create improved “match-making” between stakeholders, and improve promotional activities, including Platform usage to increase user numbers and interface.
